

## INDEX

RESUMEN	1
ABSTRACT	19
MANUSCRIPTS DISCUSSED	20
<b>I. BACKGROUND</b>	<b>21</b>
<b>1.1. Lectins</b>	<b>21</b>
1.1.1. Animal lectins	23
1.1.2. Plant lectins	26
1.1.2.1. <i>Mannose/glucose-binding lectins</i>	27
1.1.2.2. <i>N-acetyl glucosamine binding lectins</i>	29
<b>1.2. Fundamentals of protein immobilisation</b>	<b>29</b>
1.2.1. The strategies for protein immobilisation	30
1.2.1.1. <i>Characteristics of a support</i>	30
1.2.1.2. <i>Characteristics of the ligand</i>	31
1.2.2. Methods of reversible protein immobilisation	32
<i>Adsorption process</i>	33
<i>Ionic binding</i>	33
<i>Hydrophobic adsorption</i>	34
<i>Affinity immobilisation</i>	34
1.2.3. Methods of irreversible protein immobilisation	37
<i>Covalent bonds</i>	37
<i>Entrapment</i>	38
1.2.4. Immobilisation procedure	38
1.2.5. Evaluation of the affinity adsorbents	40
1.2.5.1. <i>Determination of gel bound protein</i>	40
<i>by indirect methods</i>	40
<i>by direct methods</i>	41
1.2.5.2. <i>Determination of the activity of bound protein</i>	42
1.2.6. Immobilised lectins	42

2.	<b>APPLICATIONS OF IMMOBILISED LECTINS</b>	
2.1.	Affinity immobilisation of $\beta$ -galactosidase from <i>Aspergillus oryzae</i> on lectin-based adsorbents (Manuscript I).	43
2.2.	Optimisation of a method for quantitative determination of proteins immobilised on agarose matrices (Manuscript II).	71
2.3.	Synthesis of lectin-agarose adsorbents by using the CDAP-activation technique.	
	Influence of the solid phase ligand density on the performance of affinity adsorbents (Manuscript III).	92
3.	<b>ISOLATION OF NEW LECTINS</b>	
3.1.	Isolation and characterisation of a soluble $\beta$ -galactoside binding lectin from cat liver (Manuscript IV).	117
3.2.	A N-acetylglucosamine binding lectin from <i>Solanum commersonii</i> ; partial purification and preliminary characterisation. (Manuscript V).	140
4.	<b>CONCLUSIONS</b>	150
5.	<b>REFERENCES</b>	153
6.	<b>ACKNOWLEDGEMENTS</b>	158
